Polycarbonate Enclosure Cord Grip Installation

1) Tools required: Drill, Step drill bit or 13/16" hole saw

2) Locate the position where the cord is going to be installed. Check the inside of the enclosure to make sure there is not a rib or other formed feature on the inside of the enclosure that would prevent the cord grip from seating properly.

3) Do not use a standard 13/16" drill bit as the flute is too large and will cause a large burr and cause damage to the enclosure. ¼" pilot drill bit works fine if needed. **Clean chips from inside of enclosure.**

4) Install cord grip

    a. SKU 351192 Cord Grip for cables that do not have connectors. Follow steps below.

    Steps: 1) Run cable without connector thru seal

            2) Add RJ 45 connector to cable

            3) Tighten cinch nut

    b. SKU 576422 Cord Grip for RJ45 cables that have connectors. Follow steps below.

    Steps: 1) Apply sealant

            2) Slide cable thru fitting

            3) Mate plug and jack inside ethernet system

            4) Fully seat supplied feed thru to ethernet system

            5) Tighten cinch nut only if sealant is in proper location
